Summary

Senior Front-End Engineer with 7+ years shipping high-impact B2B SaaS and AI products. Specialized in building complex, real-time React/TypeScript applications at scale. Proven ability to lead full product cycles, design systems, performance optimization, and cross-functional collaboration resulting in significant business outcomes.

Education

University of Information Technologies and Sciences *Mar 2013 – Jun 2017*
Bachelor's of Science, Computer Science and Mathematics Dhaka, Bangladesh

- Cumulative GPA: 4.0/4.0 | Dean's List, Merit Scholarship

Work Experience

Tiblo Digital *May 2024 – Present*
Lead Front-End Engineer Copenhagen, Denmark

- Designed and shipped WheelLog, a B2B tire-management SaaS, leading the full product lifecycle from discovery interviews with 20+ fleet managers through a 3-sprint prototype cycle, achieving **80% customer conversion in Q1**.
- Architected real-time multi-user collaboration with presence detection using CRDT in React, **eliminating write conflicts** in concurrent sessions and enabling live co-editing for the first time on the platform for 100k Daily Active Users.
- Streamlined client onboarding by building a requirements-analysis framework that cut discovery-to-spec time by 35% and reduced revision cycles from 4 rounds to 1, measurably improving engineering throughput.
- **Championed a documentation-first engineering culture**, introduced ADRs (Architecture Decision Records) and a component contract specification process, **cutting cross-team integration bugs by 50%** and reducing onboarding time for new engineers from 2 weeks to 4 days.

The Total Office (Contract) *Apr 2023 – May 2024*
Lead Front-end Engineer Dubai, UAE

- Optimized Core Web Vitals (LCP, CLS, FID) for an e-commerce platform with serving 500k+ monthly users, implemented image lazy loading, code splitting, and service workers cutting page load from 3.4s to 1.2s and **lifting conversion rates by 20%**.
- Drove a full accessibility overhaul, introduced ARIA attributes and customizable keyboard navigation across all core flows, achieving **98% user satisfaction** from testers with diverse abilities and full WCAG 2.1 AA compliance.
- Neutralized 411 CVEs across the dependency tree and assessed vulnerabilities by CVSS score using Snyk + npm audit, shipped remediations to all critical/high-severity issues within a single sprint, and embedded a mandatory dependency-audit gate in the CI/CD pipeline—reducing future CVE exposure by 100% at merge time.
- **Scaled front-end team velocity 2×**, introduced a component-driven development workflow with Storybook visual regression testing, reducing QA cycles from 5 days to 2 and cutting UI bug regression rate by 65% across quarterly releases.

MarketTime LLC *May 2022 – Apr 2023*
Lead Front-end Engineer Austin, Texas, USA

- Architected the token layer of the design system using Style Dictionary, defining a single source-of-truth JSON schema that compiled to CSS custom properties, JS constants, and Figma tokens simultaneously, **eliminating token drift across 4 product versions**.
- **Decoupled design system versioning from product releases** and published components as independent npm packages versioned via semantic-release, enabling teams to adopt system upgrades

asynchronously—cutting system upgrade costs by 60% and accelerating design delivery speed by 90% across 3 product teams.

- Engineered automated visual regression testing at component level, integrated Chromatic CI into the design system pipeline, catching pixel-level regressions across 200+ components before merge—reducing production UI defects by 74% over 6 months and saving 12 QA hours per release cycle.

Roxnor (Contract) *Feb 2022 – May 2022*
Front-end Engineer Dhaka, Bangladesh

- Implemented optimistic UI patterns using React's useReducer and dispatched local state updates immediately on user action, then reconciled with the API response, reducing perceived wait time by 40% and achieving a 4.7/5 beta satisfaction score.
- Built the full front end for GetGenieAI, a Gutenberg block-based AI content-generation WordPress plugin, implemented streaming AI responses via ReadableStream and TextDecoder, chunking token output into the editor in real time to deliver sub-200ms perceived latency.

Genex Infosys PLC *May 2020 – Feb 2022*
Jr. Software Engineer Dhaka, Bangladesh

- **Engineered a Conversational AI platform** for a government bank portal serving 1M+ monthly users, designed a multi-turn intent classification pipeline using Dialogflow CX with custom NLP fallback handlers, achieving 97% query resolution accuracy and reducing average resolution time by 60% while scaling to 50K concurrent sessions without latency degradation.

Project

Writer GitHub *Jun 2025 – Present*
Creator & Maintainer

- An open-source Markdown Editor with LSP, built in Terminal, AI assisted writing, Kanban board and a Freeform canvas to enhance agentic or general development workflow.
- Optimized local markdown parsing and tokenization rendering to achieve sub-16ms frame times during heavy AI streaming sessions, dynamic tags to organize and maintain notes.

Slides GitHub *Oct 2026 – Present*
Creator & Maintainer

- Designed a slideshow experience inside neovim's built in buffer creator, A custom parser for parsing Markdown headings into a center-aligned presentation layout with seamless, distraction-free rendering.

Skills

- **Core Stack**: TypeScript, JavaScript (ES2022+), Node.js, HTML5/CSS3, Golang, Python.
- **Technologies**: React, Astro, Angular, SolidJS, Svelte, Fast-API, WebSockets, LangChain, Open-CV, MongoDB, gRPC, Docker, Async AI streaming, Git, Linux, UNIX, CI/CD pipelines, AI/ML product integration.
