Emran Hossain

880-1886-324-116 | emrn.hossn@gmail.com | Portfolio

Summary

Product Designer with a software engineering background, building B2B SaaS and AI products from early exploration through launch. I bring research, interaction design, prototyping, and technical implementation together to make complex workflows easier to use and products easier to build.

Education

University of Information Technologies and Sciences *Mar 2013 – Jun 2017*
Bachelor's of Science, Computer Science and Mathematics Dhaka, Bangladesh

Work Experience

Tiblo Digital *May 2024 – Present*
Product Design Lead Copenhagen, Denmark

- Led the design of a B2B fleet-management platform serving an average of 5K–10K operators daily interacting in a realtime environment.
- Helped grow monthly active users by 35% over two quarters by taking the initiative to partner with the marketing team and identify where does the user drop offs happens.
- Built realistic fleet-telemetry prototypes with AI-assisted development for faster A/B tests.

The Total Office (Contract) *Apr 2023 – May 2024*
Product Design Lead Dubai, UAE

- Reduced churn for a 500K+ user platform by leading bi-weekly user behavior analytics reviews.
- Built a design system from scratch using "tokenization method" to standardize user interface design decision. Built rapid interactive prototypes using agentic development.

MarketTime LLC *May 2022 – Apr 2023*
Lead UI/UX Designer Austin, Texas, USA

- Reorganized the B2B order-management dashboard using task frequency and error severity as guides to design the layout.
- Designed and shipped a large design system with 50+ components, standardizing design delivery and accuracy.

Roxnor (Contract) *Feb 2022 – May 2022*
Lead Product Designer Dhaka, Bangladesh

- Cut the spatial-scanning workflow from 15 steps to five by introducing ML-assisted autocomplete, inline error recovery right in the UI.
- Reduced design-related PR review cycles from four rounds to one over three months by creating a delivery guide.
- Led the team to build an unique user experience for a computer vision powered 3D spatial-scanning workflow. Built this by interviewing 24 beta users.

Genex Infosys PLC *May 2020 – Feb 2022*
Jr. Software Engineer Dhaka, Bangladesh

- Engineered a conversational AI platform for a government banking portal serving 1M+ monthly users. Built a multi-turn intent-classification pipeline using Dialogflow CX and custom NLP fallback handlers, achieving 97% query-resolution accuracy and reducing average resolution time by 60%, while supporting 50K concurrent sessions without latency degradation.
- Contributed to the API development and documentation for an enterprise conversational AI platform deployed across a major tier-1 banking portal.

Projects

Writer GitHub *Jun 2025 – Present*
Creator & Maintainer

- An open-source Markdown Editor with LSP, built in Terminal, AI assisted writing, Kanban board and a Freeform canvas to enhance agentic or general development workflow.
- Optimized local markdown parsing and tokenization rendering to achieve sub-16ms frame times during heavy AI streaming sessions, dynamic tags to organize and maintain notes.

Slides GitHub *Oct 2026 – Present*
Creator & Maintainer

- Designed a slideshow experience with neovim's built in buffer creator, A custom parser for parsing Markdown headings into a center-aligned presentation layout with seamless, distraction-free rendering.

Skills

- **Product Design:** Figma, Adobe Suite, AI Assisted Prototyping, Design Systems, Human Interface Design, User Research, Usability Testing, Product Strategy, Documentation
- **Core Stack:** TypeScript, JavaScript (ES2022+), Node.js, HTML5/CSS3, Golang, Python
- **Technologies:** React, Astro, Angular, SolidJS, Svelte, WebSockets, LangChain, OpenCV, Git, Linux, UNIX, AI/ML Product Integration
