SUMMARY

Senior Front-End Engineer with 7+ years building high-performance B2B SaaS, AI/ML products end-to-end. Deep React/TypeScript, Golang and Python expertise paired with genuine Product Design fluency with a proven track record of shipping measurable outcomes.

WORK EXPERIENCE

Senior Front-End Engineer

May 2024 — Present

Tiblo Digital

Copenhagen, Denmark

- Designed and shipped WheelLog, a B2B tire-management SaaS, leading the full product lifecycle from discovery interviews with 20+ fleet managers through a 3-sprint prototype cycle, achieving **80% customer conversion in Q1**.
- Architected real-time multi-user collaboration with presence detection using CRDT in React, **eliminating write conflicts** in concurrent sessions and enabling live co-editing for the first time on the platform.
- Streamlined client onboarding by building a requirements-analysis framework that cut discovery-to-spec time by 35% and reduced revision cycles from 4 rounds to 1, measurably improving engineering throughput.

Lead Front-end Engineer

Apr 2023 — May 2024

The Total Office (Contract)

Dubai, UAE

- Optimized Core Web Vitals (LCP, CLS, FID) for a high-traffic e-commerce platform; implemented image lazy loading, code splitting, and service workers cutting page load from 3.4s to 1.2s and **lifting conversion rates by 20%**.
- Drove a full accessibility overhaul, introduced ARIA attributes and customizable keyboard navigation across all core flows, achieving **98% user satisfaction** from testers with diverse abilities and full WCAG 2.1 AA compliance.
- Led security remediation in partnership with the backend team, tackled 411 CVEs using Snyk and npm audit, classified by CVSS score, and shipped fixes to 3 remaining low-severity issues while embedding a mandatory dependency-audit step into the CI/CD release pipeline.

Lead Front-end Engineer

May 2022 — Apr 2023

MarketTime LLC

Austin, Texas, USA

- Architected the token layer of the design system using Style Dictionary, defining a single source-of-truth JSON schema that compiled to CSS custom properties, JS constants, and Figma tokens simultaneously, **eliminating token drift across 4 product versions**.
- Decoupled component versioning from product releases via a Storybook-powered design system and independent npm package publishing, cutting system upgrade costs by 60% and accelerating design delivery speed by 90%.

Front-end Engineer

Feb 2022 — May 2022

Roxnor (Contract)

Dhaka, Bangladesh

- Implemented optimistic UI patterns using React's useReducer; dispatched local state updates immediately on user action, then reconciled with the API response, reducing perceived wait time by 40% and achieving a 4.7/5 beta satisfaction score.
- Built the full front end for GetGenieAI, a Gutenberg block-based AI content-generation WordPress plugin; implemented streaming AI responses via ReadableStream and TextDecoder, chunking token output into the editor in real time to deliver sub-200ms perceived latency.

PROJECT

Writer

Jun 2025 — Present

Open-source Creator & Maintainer

- An open-source Markdown Editor with LSP, built in Terminal, AI assisted writing, Kanban board and a Freeform canvas to enhance agentic or general development workflow. Visit Project : <https://github.com/git-emran/simple-notes>

SKILLS

- Core Stack:** TypeScript, JavaScript (ES2022+), Node.js, HTML5/CSS3, Golang, Python.
- Technologies:** React, Astro, Angular, SolidJS, Svelte, Fast-API, WebSockets, LangChain, Open-CV, MongoDB, gRPC, Docker, Async AI streaming, Git, Linux, UNIX, CI/CD pipelines, AI/ML product integration.
