Summary

Senior Product Designer with 8+ years shipping high-impact B2B SaaS and AI products. I work across Product Design and Front-end Engineering with proven ability to lead full product cycles, design systems, performance optimization, and cross-functional collaboration resulting in significant business outcomes.

Education

University of Information Technologies and Sciences — Dhaka, Bangladesh
Bachelor's of Science, Computer Science and Mathematics — *Mar 2013 — Jun 2017*

- Cumulative GPA: 4.0/4.0 | Dean's List, Merit Scholarship

Work Experience

Product Design Lead — May 2024 — Present
Tiblo Digital — *Copenhagen, Denmark*

- Led the 0→1 UX for WheelLog, a B2B fleet-management platform serving 5K–10K operators. Ran 20+ customer interviews and a three-sprint prototyping cycle that helped bring the product to value six weeks faster and built a markdown based design system from scratch for rapid agentic development.
- Helped increase MAU by 35% over two quarters by working with PM and Marketing to identify activation drop-offs and prioritize retention improvements by redesigning the core user flows.
- Used AI-assisted development to build realistic fleet-telemetry prototypes for remote user testing, helping the team validate three major features before development.
- Led a cross-functional team of 12 (design, eng, research, policy) to ship AI citation transparency patter ns used by 1M+ users in the EU, satisfying DSA compliance requirements 3 weeks ahead of deadline.

Product Design Lead — Apr 2023 — May 2024
The Total Office (Contract) — *Dubai, UAE*

- Successfully reduced churn rate for a 500K+ user platform by running bi-weekly user behavior analytics reviews with the PM, translated findings into a prioritized backlog of UI optimizations and shipped them across two quarters.
- Redesigned a legacy platform following latest WCAG 2.1 compliancy with custom keyboard and voice navigation patterns, Also conducted 3 rounds of moderated usability testing with 30 users with disabilities, passed external audit with zero critical violations.
- Built a design system from scratch utilizing tokenization method for optimal developer experience for reusability. Built rapid prototypes using agentic development.

Lead UI/UX Designer — May 2022 — Apr 2023
MarketTime LLC — *Austin, Texas, USA*

- Reworked the B2B order-management dashboard around task frequency and error severity, giving high-frequency actions greater visual priority which reduced cognitive load on order entry.
- Built and shipped a company-wide UI component library from scratch, and design system 40+ components following the atomic design patterns, standardized design tokens, detailed interaction patterns, and rigorous documentation cutting cross-functional engineering handoff cycles.
- Led the end-to-end checkout and payment flow for "mtPay"(Stripe Integration), achieving 95% user adoption at launch by proactively resolving 12 critical friction points identified across 5 rounds of usability testing.

Lead Product Designer — Feb 2022 — May 2022
Roxnor (Contract) — *Dhaka, Bangladesh*

- Reduced spatial scanning user flow from 15 steps to 5 steps by redesigning the entire process with ML assisted autocomplete UI, inline error recovery steps, and step-level cognitive-load audits with real users, decreased inbound on-boarding support tickets.
- Acted as design-engineering bridge for a cross-functional team of 6, reduced design-related PR review cycles from 4 rounds to 1 in over 3 months.

- Designed the UX for a Computer Vision powered 3D spatial scanning workflow, built an in-app interactive guide which was validated with 3 rounds of moderated testing with a group of 24 users which made scanning easier for brand new users.

Jr. Software Engineer May 2020 — Feb 2022
Genex Infosys PLC *Dhaka, Bangladesh*

- **Engineered a Conversational AI platform** for a government bank portal serving 1M+ monthly users; designed a multi-turn intent classification pipeline using Dialogflow CX with custom NLP fallback handlers, achieving 97% query resolution accuracy and reducing average resolution time by 60% while scaling to 50K concurrent sessions without latency degradation.
- Led the design architecture and built the end-to-end UX for an enterprise Conversational AI platform deployed across a major tier-1 banking portal, driving a 90% increase in monthly customer interactions and User Satisfaction (CSAT) scores.

Project

Writer (https://github.com/git-emran/simple-notes) Jun 2025 — Present

- An open-source Markdown Editor with LSP, built in Terminal, AI assisted writing, Kanban board and a Freeform canvas to enhance agentic or general development workflow.
- Optimized local markdown parsing and tokenization rendering to achieve sub-16ms frame times during heavy AI streaming sessions, dynamic tags to organize and maintain notes.

Slides (https://github.com/git-emran/slides.nvim) Sept 2026 — Present

- Designed a slideshow experience that lives inside a developer's existing editor rather than a separate app parsing Markdown headings into a center-aligned presentation layout with seamless, distraction-free rendering.

Skills

- **Product Design**: Figma, Origami, Prototyping, Design Systems, Information Architecture, User Research, Usability Testing, Product Strategy.
- **Core Stack**: TypeScript, JavaScript (ES2022+), Node.js, HTML5/CSS3, Golang, Python.
- **Technologies**: React, Astro, Angular, SolidJS, Svelte, Fast-API, WebSockets, LangChain, Open-CV, MongoDB, gRPC, Docker, Async AI streaming, Git, Linux, UNIX, CI/CD pipelines, AI/ML product integration.
