Emran Hossain

880-1886-324-116 | emrn.hossn@gmail.com | LinkedIn | Github | Portfolio

Summary

Senior Product Designer with 8+ years shipping high-impact B2B SaaS and AI products. I work across Product Design and Front-end Engineering with proven ability to lead full product cycles, design systems, performance optimization, and cross-functional collaboration resulting in significant business outcomes.

Education

University of Information Technologies and Sciences *Mar 2013 – Jun 2017*
Bachelor's of Science, Computer Science and Mathematics Dhaka, Bangladesh

- Cumulative GPA: 4.0/4.0 | Dean's List, Merit Scholarship

Work Experience

Tiblo Digital *May 2024 – Present*
Product Design Lead Copenhagen, Denmark

- Led the 0→1 UX for WheelLog, a B2B fleet-management platform serving 5K–10K operators. Ran 20+ customer interviews and a three-sprint prototyping cycle that helped bring the product to value six weeks faster. Built a markdown-based design system from scratch for rapid agentic development.
- Helped increase MAU (Monthly Active Users) by 35% over two quarters by working with PM and Marketing to identify activation drop-offs and prioritize retention improvements through redesigning core user flows.
- Used AI-assisted development to build realistic fleet-telemetry prototypes for remote user testing, helping the team validate three major features before development.
- Led a cross-functional team of 12 across design, engineering, research, and policy to ship AI citation transparency patterns used by 1M+ users in the EU, satisfying DSA compliance requirements three weeks ahead of deadline.

The Total Office (Contract) *Apr 2023 – May 2024*
Product Design Lead Dubai, UAE

- Reduced churn for a 500K+ user platform by running bi-weekly user behavior analytics reviews with the PM, translating findings into a prioritized backlog of UI optimizations, and shipping improvements across two quarters.
- Redesigned a legacy platform to meet WCAG 2.1 accessibility requirements, including custom keyboard and voice navigation patterns. Conducted three rounds of moderated usability testing with 30 users with disabilities; passed an external audit with zero critical violations.
- Built a design system from scratch using tokenization for better developer experience and component reusability. Built rapid prototypes using agentic development.

MarketTime LLC *May 2022 – Apr 2023*
Lead UI/UX Designer Austin, Texas, USA

- Reworked the B2B order-management dashboard around task frequency and error severity, prioritizing high-frequency actions to reduce cognitive load during order entry.
- Built and shipped a company-wide UI component library and design system with 40+ components using atomic design patterns, standardized design tokens, interaction patterns, and detailed documentation, streamlining engineering handoffs.
- Led the end-to-end checkout and payment flow for mtPay (Stripe integration), achieving 95% user adoption at launch by resolving 12 critical friction points identified across five rounds of usability testing.

Roxnor (Contract) *Feb 2022 – May 2022*
Lead Product Designer Dhaka, Bangladesh

- Reduced the spatial scanning user flow from 15 steps to 5 through ML-assisted autocomplete, inline error recovery, and step-level cognitive-load audits, decreasing inbound onboarding support tickets.
- Bridged design and engineering for a cross-functional team of six, reducing design-related PR review cycles from four rounds to one over three months.

- Designed the UX for a computer-vision-powered 3D spatial scanning workflow and built an interactive in-app guide, validated through three rounds of moderated testing with 24 users.

Genex Infosys PLC *May 2020 – Feb 2022*
Jr. Software Engineer Dhaka, Bangladesh

- Engineered a conversational AI platform for a government bank portal serving 1M+ monthly users. Built a multi-turn intent classification pipeline using Dialogflow CX and custom NLP fallback handlers, achieving 97% query resolution accuracy and reducing average resolution time by 60%, while supporting 50K concurrent sessions without latency degradation.
- Led the design architecture and end-to-end UX for an enterprise conversational AI platform deployed across a major tier-1 banking portal, driving a 90% increase in monthly customer interactions and user satisfaction (CSAT).

Projects

Writer GitHub *Jun 2025 – Present*
Creator & Maintainer

- An open-source Markdown Editor with LSP, built in Terminal, AI assisted writing, Kanban board and a Freeform canvas to enhance agentic or general development workflow.
- Optimized local markdown parsing and tokenization rendering to achieve sub-16ms frame times during heavy AI streaming sessions, dynamic tags to organize and maintain notes.

Slides GitHub *Oct 2026 – Present*
Creator & Maintainer

- Designed a slideshow experience with neovim's built in buffer creator, A custom parser for parsing Markdown headings into a center-aligned presentation layout with seamless, distraction-free rendering.

Skills

- **Product Design:** Figma, Origami, Prototyping, Design Systems, Information Architecture, User Research, Usability Testing, Product Strategy.
- **Core Stack:** TypeScript, JavaScript (ES2022+), Node.js, HTML5/CSS3, Golang, Python.
- **Technologies:** React, Astro, Angular, SolidJS, Svelte, FastAPI, WebSockets, LangChain, OpenCV, MongoDB, gRPC, Docker, Async AI Streaming, Git, Linux, UNIX, CI/CD Pipelines, AI/ML Product Integration.
