SUMMARY

Senior Front-End Engineer with 7+ years building high-performance B2B SaaS, AI/ML products end-to-end. Deep React/TypeScript, Golang and Python expertise paired with genuine Product Design fluency.

WORK EXPERIENCE

Senior Front-End Engineer

May 2024 — Present

Tiblo Digital

Copenhagen, Denmark

- Designed and shipped WheelLog, a B2B tire-management SaaS, leading the full product lifecycle from discovery interviews with 20+ fleet managers through a 3-sprint prototype cycle, achieving **80% customer conversion in Q1**.
- Architected real-time multi-user collaboration with presence detection using CRDT in React, **eliminating write conflicts** in concurrent sessions and enabling live co-editing for the first time on the platform.
- Established a Figma-based design system and Storybook component library used by the full engineering team, **reducing design debt by 40%** and front-end development time by 30%.

Lead Front-end Engineer

Apr 2023 — May 2024

The Total Office (Contract)

Dubai, UAE

- Optimized Core Web Vitals (LCP, CLS, FID) for a high-traffic e-commerce platform implemented image lazy loading, code splitting, and service workers cutting page load from 3.4s to 1.2s and **lifting conversion rates by 20%**.
- Drove a full accessibility overhaul, Introduced ARIA attributes and customizable keyboard navigation across all core flows, achieving **98% user satisfaction** from testers with diverse abilities and full WCAG 2.1 AA compliance.
- Led security remediation effort in partnership with the backend team, triaging and resolving **411 CVEs down to 3** and embedding a design-review security checkpoint into the release pipeline to prevent regressions.

Lead UX/UI Developer

May 2022 — Apr 2023

MarketTime LLC

Austin, Texas, USA

- Built a company-wide UI component library from scratch standardizing design tokens, interaction patterns, and documentation **reducing front-end development time by 30%** and ensuring visual consistency across 4 product versions.
- Architected a Storybook-powered design system that decoupled component versioning from product releases, **cutting system upgrade costs by 60%** and accelerating design delivery speed by 90%.
- Designed and engineered mtPay, a Stripe-integrated in-app payment feature, leading 5 rounds of prototype usability testing before launch shipped to **95% user adoption** in the first month.

Front-end Engineer

Feb 2022 — May 2022

Roxnor (Contract)

Dhaka, Bangladesh

- Integrated the front end with AI REST APIs using React, implementing optimistic UI patterns that reduced perceived wait time by 40% and achieved a 4.7/5 user-satisfaction score in beta.
- Built a Gutenberg block-based editor for GetGenieAI, an AI-powered content-generation WordPress plugin handling async AI response streaming, loading states, and error fallbacks to deliver sub-200ms perceived latency.

PROJECT

Writer

Jun 2025 — Present

- An open-source Markdown Editor with LSP, built in Terminal, AI assisted writing, Kanban board and a Freeform canvas to enhance agentic or general development workflow. Visit Project : <https://github.com/git-emran/simple-notes>

SKILLS

- Core Stack:** TypeScript, JavaScript (ES2022+), Node.js, HTML5/CSS3, Golang, Python
- Technologies:** React, Astro, Angular, SolidJS, Svelte, Fast-API, Tailwind CSS, LangChain, REST-API, MongoDB, gRPC, Docker, Google Cloud Platform.
- AI/ML:** LangChain, AI/ML product integration, Async AI streaming, OpenCV.
- Tools:** Git, Linux, UNIX, CI/CD pipelines, Performance profiling(Lighthouse, Web Vitals).
